S&P 500 Price Index

Source: Compustat, FactSet, Standard & Poor's, J.P. Morgan Asset Management. Dividend yield is calculated as the annualized dividend rate divided by price, as provided by Compustat. Forward Price to Earnings Ratio is a bottom-up calculation based on the most recent S&P 500 Index price, divided by consensus estimates for earnings in the next 12 months (NTM), and is provided by FactSet Market Aggregates. Returns are cumulative and based on S&P 500 Index price movement only, and do not include the reinvestment of dividends. Past performance is not indicative of future returns. Guide to the Markets – U.S. Data are as of June 30, 2015.

S&P 500 Index: Forward P/E ratio

Source: FactSet, FRB, Robert Shiller, Standard & Poor's, J.P. Morgan Asset Management.

Price to Earnings is price divided by consensus analyst estimates of earnings per share for the next 12 months. Shiller's P/E uses trailing 10-years of inflation adjusted earnings as reported by companies. Dividend Yield is calculated as the trailing 12-month average dividend divided by price. Price to Book Ratio is the price divided by book value per share. Price to Cash Flow is price divided by NTM cash flow. EY Minus Baa Yield is the forward earnings yield (consensus analyst estimates of EPS over the next 12 months divided by price) minus the Moody's Baa seasoned corporate bond yield. Std. dev. over/undervalued is calculated using the average and standard deviation over 25-years for each measure. *P/CF is a 20-year avg. due to cash flow data availability.

Guide to the Markets – U.S. Data are as of June 30, 2015.

Forward P/E and subsequent 1-yr returns

S&P 500 Total Return Index

Forward P/E and subsequent 5-yr annualized returns

S&P 500 Total Return Index

Source: FactSet, Reuters, Standard & Poor's, J.P. Morgan Asset Management. Returns are 12 month and 60 month annualized total returns, measured monthly, beginning June 30, 1990. R^2 represents the percent of total variation in total returns that can be explained by forward P/E ratios. Guide to the Markets – U.S. Data are as of June 30, 2015.

S&P 500 earnings per share

Index quarterly operating earnings

Profit margins

Total leverage

S&P 500, ratio of total debt to total equity, quarterly

Source: BEA, Compustat, FactSet, Standard & Poor's, J.P. Morgan Asset Management. EPS levels are based on operating earnings per share. *Most recently available data is 1Q15 which is a Standard & Poor's estimate. Future earnings estimates are Standard & Poor's consensus analyst expectations. **S&P 500 Operating EPS % of Sales per Share fell to 0% in 4Q2008 and is adjusted on the chart. Past performance is not indicative of future returns. Guide to the Markets – U.S. Data are as of June 30, 2015.

S&P 500 contributions to earnings by sector

1Q 2015 EPS growth

Year-over-year

S&P 500 international revenues

% of total revenues*, 2013

U.S. dollar

Year-over-year % change, quarterly, USD major currencies index

Source: Compustat, Federal Reserve, S&P 500 individual company 10K filings, S&P Index Alert, Standard & Poor's, J.P. Morgan Asset Management.
 *International revenue numbers are subject to individual company management interpretation and reporting. S&P analysis was done on a company by company basis through 10K filings and is subject to variability based on accounting principles. Data is from a Standard & Poor's report *S&P 500 Foreign Sales 2013* by Howard Silverblatt. Currencies in the Trade Weighted U.S. Dollar Major Currencies Index are: British Pound, Euro, Swedish Kroner, Australian Dollar, Canadian Dollar, Japanese Yen, and Swiss Franc.

Source: FactSet, Russell Investment Group, Standard & Poor's, J.P. Morgan Asset Management. All calculations are cumulative total return, including dividends reinvested for the stated period. Since Market Peak represents period 10/9/07 – 6/30/15, illustrating market returns since the S&P 500 Index high on 10/9/07. Since Market Low represents period 3/9/09 – 6/30/15, illustrating market returns since the S&P 500 Index low on 3/9/09. Returns are cumulative returns, not annualized. For all time periods, total return is based on Russell-style indexes with the exception of the large blend category, which is based on the S&P 500 Index. Past performance is not indicative of future returns. P/E ratios reflect latest available data. Earnings estimates are as of May for Russell Indexes and as of June for Standard & Poor's. Guide to the Markets – U.S. Data are as of June 30, 2015.

Source: FactSet, Russell Investment Group, Standard & Poor's, J.P. Morgan Asset Management.

All calculations are cumulative total return, not annualized, including dividends for the stated period. Since Market Peak represents period 10/9/07 – 6/30/15. Since Market Low represents period 3/9/09 – 6/30/15. Correlation to Treasury yields are trailing 2-year monthly correlations between S&P 500 sector price returns and 10-year Treasury yield movements. Forward P/E Ratio is a bottom-up calculation based on the most recent S&P 500 Index price, divided by consensus estimates for earnings in the next 12 months (NTM), and is provided by FactSet Market Aggregates. Trailing P/E ratios are bottom-up values defined as month-end price divided by the last 12 months of available reported earnings. Historical data can change as new information becomes available. Note that P/E ratios for the S&P 500 may differ from estimates elsewhere in this book due to the use of a bottom-up calculation of constituent earnings (as described) rather than a top-down calculation. This methodology is used to allow proper comparison of sector level data to broad index level data. Dividend yields are bottom-up values defined as the annualized value of the most recent cash dividend as a percent of month-end price. Beta calculations are based on 10 years of monthly price returns for the S&P 500 and its sub-indices. Beta's are calculated on a monthly frequency over the past 10-years. Past performance is not indicative of future returns. Guide to the Markets – U.S. Data are as of June 30, 2015.

S&P 500 sector P/Es relative to history

15 year NTMA P/E, standard deviations above/below average

S&P 500 sector projected 2015 annual EPS growth*

Sector dispersion

Standard deviation across annual S&P 500 sector returns

Source: CBOE, FactSet, Standard & Poor's, J.P. Morgan Asset Management.

*EPS growth projections are Standard and Poor's estimates for full year 2015. Telecom earnings growth is due to the accounting for pension charges for the two largest names in the sector in 4Q14 which lowered the base for growth in 2015.

Forward Price to Earnings Ratio is a bottom-up calculation based on the most recent S&P 500 Index price, divided by consensus estimates for earnings in the next 12 months (NTM), and is provided by FactSet Market Aggregates.

S&P 500 composite declines from all-time highs

Characteristics of past bear markets

| ◆ | Market Corrections | Cycle Peak | Bull Market Duration (Months) | Decline from All-time High | Recession | Commodity Spike | Aggressive Fed Tightening | Extreme Valuations | Commentary |
|----|-------------------------|------------|-------------------------------|----------------------------|-----------|-----------------|---------------------------|--------------------|---|
| 1 | Crash of 1929 | Aug 1929 | 37 | -84% | ◆ | | | ◆ | Excessive leverage, irrational exuberance |
| 2 | 1937 Fed Tightening | Feb 1937 | 22 | -74% | ◆ | | ◆ | | Premature monetary tightening |
| 3 | Post WWII Crash | May 1946 | 48 | -54% | ◆ | | | ◆ | Post-war demobilization, recession fears |
| 4 | Flash Crash of 1962 | Dec 1961 | 14 | -22% | | | | ◆ | Flash crash, Cuban Missile Crisis |
| 5 | Tech Crash of 1970 | Dec 1968 | 73 | -29% | ◆ | ◆ | ◆ | | Economic overheating, civil unrest |
| 6 | Stagflation | Dec 1972 | 29 | -43% | ◆ | ◆ | | | OPEC oil embargo |
| 7 | Volcker Tightening | Nov 1980 | 31 | -19% | ◆ | ◆ | ◆ | | Extremely high rates to rein in inflation |
| 8 | 1987 Crash | Aug 1987 | 59 | -27% | | | | | Program trading, overheated market |
| 9 | Tech Bubble | Aug 2000 | 118 | -42% | ◆ | | | ◆ | Extreme valuations, mostly in tech stocks |
| 10 | Global Financial Crisis | Oct 2007 | 55 | -51% | ◆ | ◆ | ◆ | | Leverage, housing, Lehman collapse |

Source: FactSet, NBER, Robert Shiller, Standard & Poor's, J.P. Morgan Asset Management.

*A bear market represents a 20% or more decline from the previous market high using a monthly frequency.

Periods of "Recession" are defined using NBER business cycle dates. "Commodity Spikes" are defined as significant rapid upward moves in oil prices.

Periods of "Extreme Valuations" are those where S&P 500 last twelve months P/E levels were approximately two standard deviations above long run averages. "Aggressive Fed Tightening" is defined as Federal Reserve monetary tightening that was unexpected and significant in magnitude.

Guide to the Markets – U.S. Data are as of June 30, 2015.

Economy

Real GDP

Year-over-year % change

Components of GDP

1Q15 nominal GDP, USD trillions

Source: BEA, FactSet, J.P. Morgan Asset Management.

Values may not sum to 100% due to rounding. Quarter over quarter percent changes are at an annualized rate. Average represents the annualized growth rate for the full period. Expansion average refers to the period starting in the second quarter of 2009.

Guide to the Markets – U.S. Data are as of June 30, 2015.

Consumer balance sheet

1Q15, trillions of dollars outstanding, not seasonally adjusted

Household debt service ratio

Debt payments as % of disposable personal income, SA

Household net worth

Not seasonally adjusted, USD billions

Source: BEA, FactSet, FRB, J.P. Morgan Asset Management.

Data include households and nonprofit organizations. SA – seasonally adjusted. *Revolving includes credit cards. **1Q15 household debt service ratio and 1Q15 household net worth are J.P. Morgan Asset Management estimates. Values may not sum to 100% due to rounding.

Guide to the Markets – U.S. Data are as of June 30, 2015.

Light vehicle sales

Millions, seasonally adjusted annual rate

Manufacturing and trade inventories

Days of sales, seasonally adjusted

Housing starts

Thousands, seasonally adjusted annual rate

Real capital goods orders

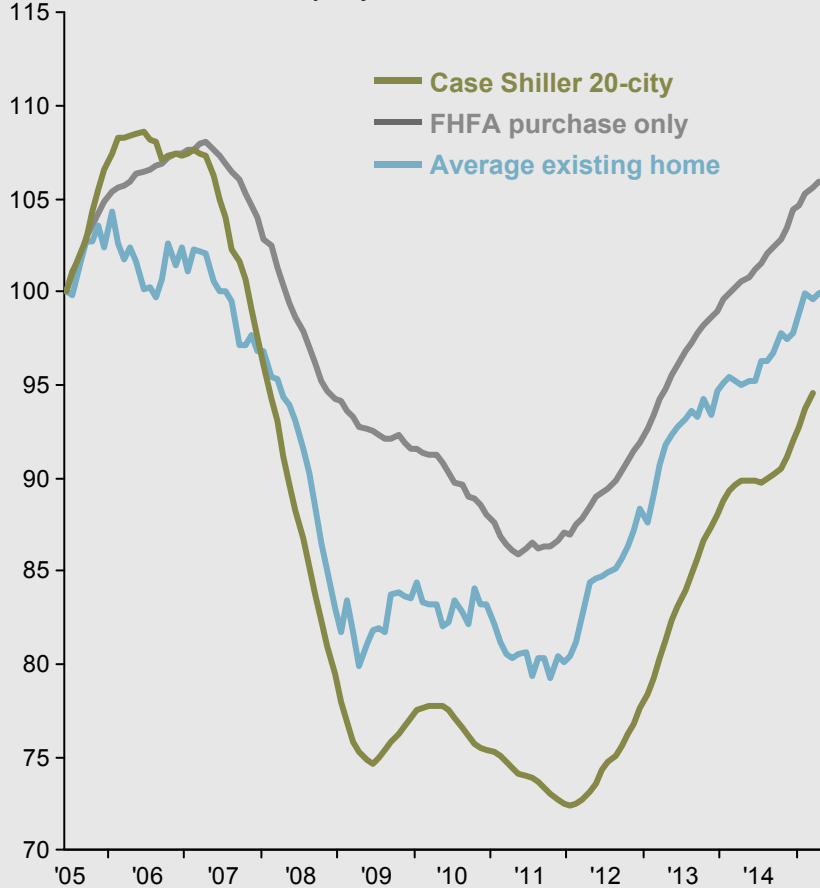

Non-defense capital goods orders ex. aircraft, USD billions, SA

Source: BEA, Census Bureau, FactSet, J.P. Morgan Asset Management.
 SA – seasonally adjusted. Capital goods orders deflated using the producer price index for capital goods with a base year of 2004.
 Guide to the Markets – U.S. Data are as of June 30, 2015.

Home prices

Indexed to 100, seasonally adjusted

Housing Affordability Index

Avg. mortgage payment as a % of household income

Lending standards for approved mortgage loans

Average FICO score based on origination date

Sources: (Left) National Association of Realtors, Standard & Poor's, FHFA, FactSet, J.P. Morgan Asset Management. (Top right) Census Bureau, J.P. Morgan Asset Management. Monthly mortgage payment assumes the prevailing 30-year fixed-rate mortgage rates and average new home prices excluding a 20% down payment. (Bottom Right) McDash, J.P. Morgan Securitized Product Research, J.P. Morgan Asset Management. Guide to the Markets – U.S. Data are as of June 30, 2015.

Growth in working age population

Percent increase in civilian non-institutional population ages 16-64

Growth in investment in structures and equipment

Nonresidential fixed assets, year-over-year % change

Drivers of GDP growth

Average year-over-year percent change

Source: BEA, BLS, Census Bureau, DOD, DOJ, J.P. Morgan Asset Management.

GDP drivers are calculated as the average annualized growth between Q4 of the first and last year. Future working age population is calculated as the total estimated number of Americans from the Census Bureau, controlled for military enrollment, growth in institutionalized population, and demographic trends.

Guide to the Markets – U.S. Data are as of June 30, 2015.

The 2015 federal budget

CBO Baseline forecast, USD trillions

Federal budget surplus/deficit

% of GDP, 1990 – 2025, 2015 CBO Baseline

Federal net debt (accumulated deficits)

% of GDP, 1940 – 2025, 2015 CBO Baseline, end of fiscal year

Source: U.S. Treasury, BEA, CBO, St. Louis Fed, J.P. Morgan Asset Management.

2015 Federal Budget is based on the CBO's March 2015 Baseline Budget Forecast. Other spending includes, but is not limited to, health insurance subsidies, income security, and federal civilian and military retirement.

Note: Years shown are fiscal years (Oct. 1 through Sep. 30). 2015 numbers are CBO estimates as of March 2015.

Guide to the Markets – U.S. Data are as of June 30, 2015.

Civilian unemployment rate and year-over-year growth in wages of production and non-supervisory workers
Seasonally adjusted, percent

Price of oil

Brent crude, nominal prices, USD/barrel

Source: EIA, IMF, FactSet, J.P. Morgan Asset Management.
 Brent crude are monthly averages in USD using global spot ICE prices.
 *Forecasts are from the April 2015 EIA Short-Term Energy Outlook and start in 2015.
 Guide to the Markets – U.S. Data are as of June 30, 2015.

Economy

Economic drag from oil prices

U.S. Petroleum imports as a % of GDP

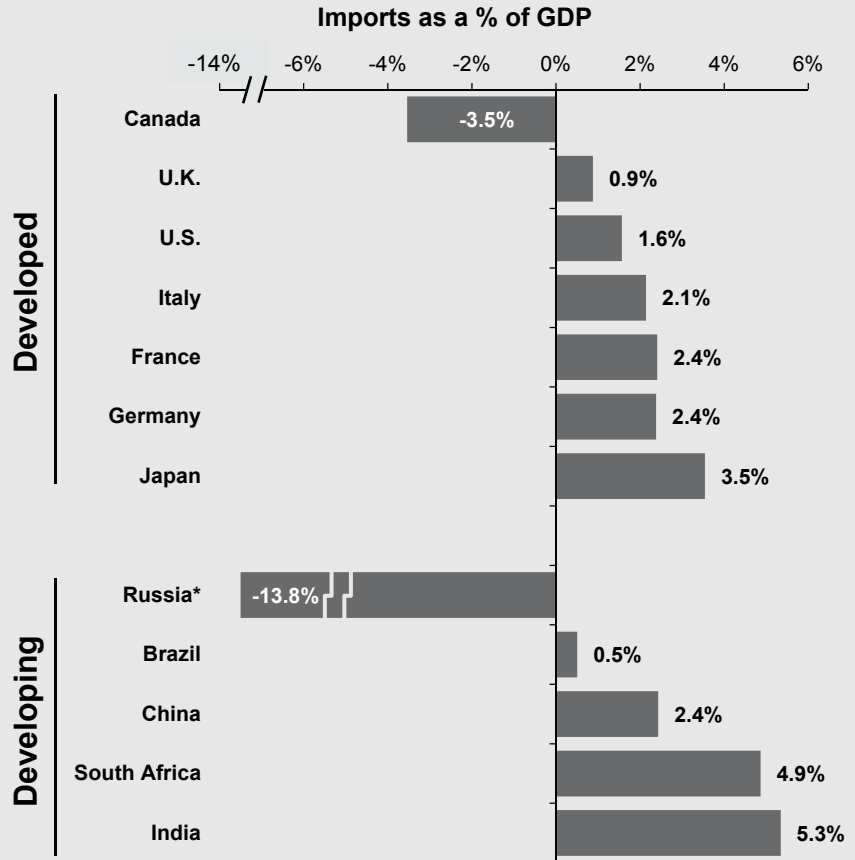

Percent of income spent on gasoline and motor oil

Before-tax income quintile, percent of spending, 2013

Oil importers and exporters

Net imports as a percent of GDP, 2013

Source: (Top left) BEA, FactSet, J.P. Morgan Asset Management. (Bottom Left) BEA, J.P. Morgan Asset Management. (Right) EIA, IMF, J.P. Morgan Asset Management. *Russia imports as a percent of GDP was -13.8% in 2013 and is adjusted on the chart. Guide to the Markets – U.S. Data are as of June 30, 2015.

Consumer Sentiment Index – University of Michigan

Source: Standard & Poor's, University of Michigan, FactSet, J.P. Morgan Asset Management.
 Peak is defined as the highest index value before a series of lower lows, while a trough is defined as the lowest index value before a series of higher highs. Subsequent 12-month S&P 500 returns are price returns only, which excludes dividends. Impact on consumer sentiment is based on a multivariate monthly regression between 1/31/2000 – 5/31/2015.
 Guide to the Markets – U.S. Data are as of June 30, 2015.

Nominal and real 10-year Treasury yields

Source: BLS, Federal Reserve, J.P. Morgan Asset Management. Real 10-year Treasury yields are calculated as the daily Treasury yield less year-over-year core CPI inflation for that month except for June 2015, where real yields are calculated by subtracting out May 2015 year-over-year core inflation. All returns above reflect annualized total returns, which include reinvestment of dividends. Corporate bond returns are based on a composite index of investment grade bond performance. Guide to the Markets – U.S. Data are as of June 30, 2015.

Federal funds rate expectations

FOMC and market expectations for the Fed Funds rate

Source: FactSet, Federal Reserve, J.P. Morgan Asset Management.

Market expectations are the federal funds rates priced into the fed futures market as of the date of the June 2015 FOMC meeting. *Forecasts of 17 Federal Open Market Committee (FOMC) participants, midpoints of central tendency except for federal funds rate which is a median estimate.

Guide to the Markets – U.S. Data are as of June 30, 2015.

Yield curve

U.S. Treasury yield curve

Estimated notional global bond supply and demand*

USD billions, per annum

Correlation of government bonds

Correlation*** between U.S. Treasury and German Bund yields

Source: Bloomberg, Central bank sources, FactSet, Federal Reserve, ICI, IMF, J.P. Morgan Securities, J.P. Morgan Asset Management.

*The gap between bond demand and supply should be equal to zero at all times. The gap shown here is in notional amounts rather than market values, and is a reflection of 1) noise resulting from mismeasurement of either demand or supply and 2) A genuine gap between the notional amounts of bond supply and demand, which in the case of excess supply will have to close by a rise in bond yields so that the value of the stock of bonds falls to the same demand level. **Institutions includes banks, pension funds and insurance companies. ***Rolling six month correlation of weekly change in yield.

Guide to the Markets – U.S. Data are as of June 30, 2015.

Nominal GDP growth

Rebased to 100 at Q1 2008

Central bank assets – Percent of nominal GDP

Market expectations for target policy rate

Source: Bloomberg, FactSet, various national statistics agencies, J.P. Morgan Global Economics Research, US Federal Reserve, J.P. Morgan Asset Management.

*Central bank assets as percent of nominal GDP is forecasted from 2Q15 to 1Q16 using J.P. Morgan Global Economics Research nominal GDP forecasts and assumptions for central bank balance sheet size based on statements released by each respective central bank and its governors. Target policy rates for Japan are estimated using EuroYen 3m futures contracts less a risk premium of 6bps. Guide to the Markets – U.S. Data are as of June 30, 2015.

Price impact of a 1% rise/fall in interest rates*

Source: Barclays Capital, FactSet, U.S. Treasury, J.P. Morgan Asset Management. Sectors shown above are provided by Barclays Capital and are represented by – Broad Market: U.S. Aggregate; MBS: U.S. Aggregate Securitized - MBS; Corporate: U.S. Corporates; Municipals: Muni Bond 10-year; High Yield: Corporate High Yield; TIPS: Treasury Inflation Protection Securities (TIPS). Floating Rate: FRN (BBB); Convertibles: U.S. Convertibles Composite; ABS: ABS + CMBS. Treasury securities data for # of issues based on U.S. Treasury benchmarks from Barclays Capital. Yield and return information based on bellwethers for Treasury securities. Sector yields reflect yield to worst, while Treasury yields are yield to maturity. Correlations are based on 10-years of monthly returns for all sectors. Change in bond price is calculated using both duration and convexity according to the following formula: New Price = (Price + (Price * -Duration * Change in Interest Rates)) + (0.5 * Price * Convexity * (Change in Interest Rates)^2). *Calculation assumes 2-year Treasury interest rate falls 0.64% to 0.00%, as interest rates can only fall to 0.00%. Chart is for illustrative purposes only. Past performance is not indicative of future results. Guide to the Markets – U.S. Data are as of June 30, 2015.

Global bond market

USD trillions

Source: Barclays Capital, BIS, FactSet, J.P. Morgan Asset Management.

Fixed income sectors shown above are provided by Barclays Capital and are represented by the global aggregate for each country except where noted. EMD sectors are represented by the J.P. Morgan EMBIG Diversified Index (USD), the J.P. Morgan GBI EM Global Diversified Index (LCL), and the J.P. Morgan CEMBI Broad Diversified Index (Corp). European Corporates are represented by the Barclays Euro Aggregate Corporate Index and the Barclays Pan-European High Yield index. Sector yields reflect yield to worst. Duration is modified duration. Correlations are based on 7 years of monthly returns for all sectors. Past performance is not indicative of future results. Guide to the Markets – U.S. Data are as of June 30, 2015.

10-year muni taxable equivalent yield

Taxable equivalent muni and Treasury yields

State & local government debt service

% of current expenditures

Municipal bond issuance*

Revenue and GO issues, USD billions

Source: Barclays Capital, BEA, FactSet, SIFMA, U.S. Treasury, J.P. Morgan Asset Management.
 Taxable equivalent yields are calculated for the highest federal marginal tax bracket. 2015 tax rate includes the net investment income tax of 3.8%.
 *Excludes maturities of 13 months or less and private placements. Interest payments include interest accrued on defined benefit liabilities.
 Guide to the Markets – U.S. Data are as of June 30, 2015.

High yield spreads and defaults

U.S. corporate debt market liquidity

Annual flows into high yield and leveraged loan funds

Source: Barclays Capital, Federal Reserve, J.P. Morgan, Strategic Insight, U.S. Treasury, J.P. Morgan Asset Management. Default rates are defined as the par value percentage of the total market trading at or below 50% of par value and include any Chapter 11 filing, prepackaged filing or missed interest payments. Spreads indicated are benchmark yield to worst less comparable maturity Treasury yields. Yield to worst is defined as the lowest potential yield that can be received on a bond without the issuer actually defaulting and reflects the possibility of the bond being called at an unfavorable time for the holder. *Dealer Inventories for all corporate securities including: Investment grade, below investment grade, and commercial paper. Flows include ETFs and are as of May 2015. Past performance is not indicative of comparable future results. Guide to the Markets – U.S. Data are as of June 30, 2015.

EMD indices by credit ratings

Real policy rates – monthly

EMD sovereign spreads by country

USD denominated sovereign debt spread, basis points

Source: J.P. Morgan Global Economic Research, FactSet, J.P. Morgan Asset Management.
 Local Sovereign: J.P. Morgan Government Bond Index – EM (GBI-EM) is a local currency denominated index tracking bonds issued by EM sovereigns;
 USD Sovereign: J.P. Morgan EMBI Global (EMBIG) Index is a USD-denominated external debt index tracking bonds issued by EM sovereigns and quasi-sovereigns;
 USD Corporate: J.P. Morgan Corporate Emerging Bond Index Broad (CEMBI) is a USD-denominated external debt index tracking bonds issued by corporations in developing nations.
 Real policy rates represent GDP-weighted aggregates estimated by J.P. Morgan Global Economics Research. Real policy rates are short-term target interest rates set by central banks minus year-over-year inflation. Sovereign spread is the composite stripped spread for the country sub-indices of the EMBIG, calculated using cash flows of individual bonds rather than a single maturity. The stripped spread is the spread over treasury after adjusting for collateralized cash flows. *India average since 10/31/12.

European sovereign funding costs

10-year benchmark bond yield

Government fiscal drag

% of potential GDP, reduction in structural deficits

Source: FactSet, IMF, Tullett Prebon, J.P. Morgan Asset Management. Data are based on the April 2015 World Economic Outlook. Government deficits are calculated by the IMF as the general government structural balance. The structural balance excludes the normal impact of the business cycle, providing a clearer measure of the independent impact of changes in government spending and taxation on demand in the economy. *Eurozone includes a J.P. Morgan Asset Management estimate for the 2017 structural deficit as a % of GDP. Guide to the Markets – U.S. Data are as of June 30, 2015.

International

The impact of urbanization

Urbanization ratios and GDP per capita (2013 USD), 1961 – 2013

Share of global nominal consumption

Current dollar household expenditures, 1990 – 2013

Growth of the middle class

Percent of total population

Source: The Brookings Institution, World Bank, United Nations, J.P. Morgan Asset Management. Real GDP per Capita numbers are current U.S. dollar GDP per capita figures from the World Bank, adjusted by the 2013 U.S. dollar GDP deflator. Middle class is defined as \$3,600-\$36,000 annual per capita income in purchasing power parity terms. Historical and forecast figures come from the Brookings Development, Aid and Governance Indicators. Guide to the Markets – U.S. Data are as of June 30, 2015.

EM vs. DM growth and equity performance

Monthly, consensus expectations for GDP growth in 12 months

Regional economic growth

Real GDP, year-over-year % change

Sources of growth

% of total exports, 2013

Source: Consensus Economics, J.P. Morgan Global Economic Research, MSCI, U.N. Commodity Trade Statistics Database, World Bank, J.P. Morgan Asset Management.

“Year - over - year EM - DM GDP Growth” is consensus estimates for EM growth in the next twelve months minus consensus estimates for DM growth in the next twelve months, provided by Consensus Economics. “MSCI EM / MSCI DM” is the USD MSCI Emerging Markets Index price level over the USD MSCI The World Index price level, rebased to 1995=100. Commodities are defined by SITC codes 0-4.

Range of stock, bond and blended total returns

Annual total returns, 1950 – 2014

| | Annual avg. total return | Growth of \$100,000 over 20 years |
|------------------------|--------------------------|-----------------------------------|
| Stocks | 11.2% | \$833,227 |
| Bonds | 6.1% | \$327,106 |
| 50/50 portfolio | 9.1% | \$565,743 |

Sources: Barclays Capital, FactSet, Federal Reserve, Robert Shiller, Strategas/Ibbotson, J.P. Morgan Asset Management. Returns shown are based on calendar year returns from 1950 to 2014. Stocks represent the S&P 500 and Bonds represent Strategas/Ibbotson for periods from 1950-1980 and Barclays Aggregate after index inception in 1980. Growth of \$100,000 is based on annual average total returns from 1950-2014.

Guide to the Markets – U.S. Data are as of June 30, 2015.

Portfolio returns: Equities vs. equity and fixed income blend

20-year annualized returns by asset class (1995 – 2014)

Source: Morningstar Direct, Dalbar Inc., J.P. Morgan Asset Management.
 Indexes used are as follows: REITs: NAREIT Equity REIT Index, EAFE: MSCI EAFE, Oil: WTI Index, Bonds: Barclays Capital U.S. Aggregate Index, Homes: median sale price of existing single-family homes, Gold: USD/troy oz, Inflation: CPI. 60/40: A balanced portfolio with 60% invested in S&P 500 Index and 40% invested high quality U.S. fixed income, represented by the Barclays U.S. Aggregate Index. The portfolio is rebalanced annually. Average asset allocation investor return is based on an analysis by Dalbar Inc., which utilizes the net of aggregate mutual fund sales, redemptions and exchanges each month as a measure of investor behavior. Returns are annualized (and total return where applicable) and represent the 20-year period ending 12/31/14 to match Dalbar's most recent analysis.

Guide to the Markets – U.S. Data are as of June 30, 2015.

Annual income generated by \$100,000 investment in a 6-mo. CD

M2 money supply as a % of nominal GDP

| Money supply component | USD billions | Weight in money supply |
|---|-----------------|------------------------|
| M2-M1 | \$8,951 | 78.4% |
| Retail MMMFs | \$614 | 5.4% |
| Savings deposits | \$7,864 | 68.9% |
| Small time deposits | \$474 | 4.2% |
| Institutional MMMFs | \$1,799 | 15.8% |
| Cash in IRA & Keogh accounts | \$660 | 5.8% |
| Total | \$11,411 | 100.0% |

Source: Bankrate.com, Federal Reserve, St. Louis Fed, J.P. Morgan Asset Management.
 All cash measures obtained from the Federal Reserve are seasonally adjusted monthly numbers. All numbers are in billions of U.S. dollars. Small-denomination time deposits are those issued in amounts of less than \$100,000. All IRA and Keogh account balances at commercial banks and thrift institutions are subtracted from small time deposits. Annual income is for illustrative purposes and is calculated based on the 6-month CD yield on average during each year and \$100,000 invested. IRA and Keogh account balances at money market mutual funds are subtracted from retail money funds. Past performance is not indicative of comparable future results.

Asset allocation: Corporate DB plans vs. endowments

Defined Benefit plans: Russell 3000 companies

Pension return assumptions: S&P 500 companies

Source: Compustat/FactSet, NACUBO (National Association of College and University Business Officers), Towers Watson, J.P. Morgan Asset Management. Asset allocation as of 2012. *Funded status for 1Q15 estimated using market returns. Endowments represents dollar-weighted average data of 842 colleges and universities. Pension Return Assumptions based on all available and reported data from S&P 500 Index companies. Pension Assets, Liabilities and Funded Status based on Russell 3000 companies reporting pension data. Return assumption bands are inclusive of upper range. All information is shown for illustrative purposes only. Guide to the Markets – U.S. Data are as of June 30, 2015.

All indexes are unmanaged and an individual cannot invest directly in an index. Index returns do not include fees or expenses.

The **S&P 500 Index** is widely regarded as the best single gauge of the U.S. equities market. This world-renowned index includes a representative sample of 500 leading companies in leading industries of the U.S. economy. Although the S&P 500 Index focuses on the large-cap segment of the market, with approximately 75% coverage of U.S. equities, it is also an ideal proxy for the total market. An investor cannot invest directly in an index.

The **S&P 400 Mid Cap Index** is representative of 400 stocks in the mid-range sector of the domestic stock market, representing all major industries.

The **Russell 3000 Index**® measures the performance of the 3,000 largest U.S. companies based on total market capitalization.

The **Russell 1000 Index**® measures the performance of the 1,000 largest companies in the Russell 3000.

The **Russell 1000 Growth Index**® measures the performance of those Russell 1000 companies with higher price-to-book ratios and higher forecasted growth values.

The **Russell 1000 Value Index**® measures the performance of those Russell 1000 companies with lower price-to-book ratios and lower forecasted growth values.

The **Russell Midcap Index**® measures the performance of the 800 smallest companies in the Russell 1000 Index.

The **Russell Midcap Growth Index**® measures the performance of those Russell Midcap companies with higher price-to-book ratios and higher forecasted growth values. The stocks are also members of the Russell 1000 Growth index.

The **Russell Midcap Value Index**® measures the performance of those Russell Midcap companies with lower price-to-book ratios and lower forecasted growth values. The stocks are also members of the Russell 1000 Value index.

The **Russell 2000 Index**® measures the performance of the 2,000 smallest companies in the Russell 3000 Index.

The **Russell 2000 Growth Index**® measures the performance of those Russell 2000 companies with higher price-to-book ratios and higher forecasted growth values.

The **Russell 2000 Value Index**® measures the performance of those Russell 2000 companies with lower price-to-book ratios and lower forecasted growth values.

The **Russell Top 200 Index**® measures the performance of the largest cap segment of the U.S. equity universe. It includes approximately 200 of the largest securities based on a combination of their market cap and current index membership and represents approximately 68% of the U.S. market.

The **MSCI® EAFE** (Europe, Australia, Far East) Net Index is recognized as the pre-eminent benchmark in the United States to measure international equity performance. It comprises 21 MSCI country indexes, representing the developed markets outside of North America.

The **MSCI Emerging Markets Index**SM is a free float-adjusted market capitalization index that is designed to measure equity market performance in the global emerging markets. As of June 2007, the MSCI Emerging Markets Index consisted of the following 25 emerging market country indices: Argentina, Brazil, Chile, China, Colombia, Czech Republic, Egypt, Hungary, India, Indonesia, Israel, Jordan, Korea, Malaysia, Mexico, Morocco, Pakistan, Peru, Philippines, Poland, Russia, South Africa, Taiwan, Thailand, and Turkey.

The **MSCI ACWI (All Country World Index) Index** is a free float-adjusted market capitalization weighted index that is designed to measure the equity market performance of developed and emerging markets. As of June 2009 the **MSCI ACWI** consisted of 45 country indices comprising 23 developed and 22 emerging market country indices.

The **MSCI Small Cap Indices**SM target 40% of the eligible Small Cap universe within each industry group, within each country. MSCI defines the Small Cap universe as all listed securities that have a market capitalization in the range of USD200-1,500 million.

The **MSCI Value and Growth Indices**SM cover the full range of developed, emerging and All Country MSCI Equity indexes. As of the close of May 30, 2003, MSCI implemented an enhanced methodology for the MSCI Global Value and Growth Indices, adopting a two dimensional framework for style segmentation in which value and growth securities are categorized using different attributes - three for value and five for growth including forward-looking variables. The objective of the index design is to divide constituents of an underlying MSCI Standard Country Index into a value index and a growth index, each targeting 50% of the free-float adjusted market capitalization of the underlying country index. Country Value/Growth indices are then aggregated into regional Value/Growth indices. Prior to May 30, 2003, the indices used Price/Book Value (P/BV) ratios to divide the standard MSCI country indices into value and growth indices. All securities were classified as either "value" securities (low P/BV securities) or "growth" securities (high P/BV securities), relative to each MSCI country index.

The following **MSCI Total Return Indices**SM are calculated with gross dividends:

This series approximates the maximum possible dividend reinvestment. The amount reinvested is the dividend distributed to individuals resident in the country of the company, but does not include tax credits.

The **MSCI Europe Index**SM is a free float-adjusted market capitalization index that is designed to measure developed market equity performance in Europe. As of June 2007, the MSCI Europe Index consisted of the following 16 developed market country indices: Austria, Belgium, Denmark, Finland, France, Germany, Greece, Ireland, Italy, the Netherlands, Norway, Portugal, Spain, Sweden, Switzerland and the United Kingdom.

The **MSCI Pacific Index**SM is a free float-adjusted market capitalization index that is designed to measure equity market performance in the Pacific region. As of June 2007, the MSCI Pacific Index consisted of the following 5 Developed Market countries: Australia, Hong Kong, Japan, New Zealand, and Singapore.

Credit Suisse/Tremont Hedge Fund Index is compiled by Credit Suisse Tremont Index, LLC. It is an asset-weighted hedge fund index and includes only funds, as opposed to separate accounts. The Index uses the Credit Suisse/Tremont database, which tracks over 4500 funds, and consists only of funds with a minimum of US\$50 million under management, a 12-month track record, and audited financial statements. It is calculated and rebalanced on a monthly basis, and shown net of all performance fees and expenses. It is the exclusive property of Credit Suisse Tremont Index, LLC.

The **NFI-ODCE**, short for NCREIF Fund Index - Open End Diversified Core Equity, is an index of investment returns reporting on both a historical and current basis the results of 33 open-end commingled funds pursuing a core investment strategy, some of which have performance histories dating back to the 1970s. The NFI-ODCE Index is capitalization-weighted and is reported gross of fees. Measurement is time-weighted.

The **NAREIT EQUITY REIT Index** is designed to provide the most comprehensive assessment of overall industry performance, and includes all tax-qualified real estate investment trusts (REITs) that are listed on the NYSE, the American Stock Exchange or the NASDAQ National Market List.

The **Dow Jones Industrial Average** measures the stock performance of 30 leading blue-chip U.S. companies.

The **Bloomberg Commodity Index** is composed of futures contracts on physical commodities and represents twenty two separate commodities traded on U.S. exchanges, with the exception of aluminum, nickel, and zinc

All indexes are unmanaged and an individual cannot invest directly in an index. Index returns do not include fees or expenses.

The **S&P GSCI Index** is a composite index of commodity sector returns representing an unleveraged, long-only investment in commodity futures that is broadly diversified across the spectrum of commodities. The returns are calculated on a fully collateralized basis with full reinvestment. Individual components qualify for inclusion in the index on the basis of liquidity and are weighted by their respective world production quantities.

The **Barclays Capital U.S. Aggregate Index** represents securities that are SEC-registered, taxable, and dollar denominated. The index covers the U.S. investment grade fixed rate bond market, with index components for government and corporate securities, mortgage pass-through securities, and asset-backed securities. These major sectors are subdivided into more specific indexes that are calculated and reported on a regular basis.

This **U.S. Treasury Index** is a component of the U.S. Government index.

West Texas Intermediate (WTI) is the underlying commodity for the New York Mercantile Exchange's oil futures contracts.

The **Barclays Capital High Yield Index** covers the universe of fixed rate, non-investment grade debt. Pay-kind (PIK) bonds, Eurobonds, and debt issues from countries designated as emerging markets (e.g., Argentina, Brazil, Venezuela, etc.) are excluded, but Canadian and global bonds (SEC registered) of issuers in non-EMG countries are included. Original issue zeroes, step-up coupon structures, and 144-As are also included.

The **Barclays Capital 1-3 Month U.S. Treasury Bill Index** includes all publicly issued zero-coupon U.S. Treasury Bills that have a remaining maturity of less than 3 months and more than 1 month, are rated investment grade, and have \$250 million or more of outstanding face value. In addition, the securities must be denominated in U.S. dollars and must be fixed rate and non convertible.

The **Barclays Capital General Obligation Bond Index** is a component of the **Barclays Capital Municipal Bond Index**. To be included in the index, bonds must be general obligation bonds rated investment-grade (Baa3/BBB- or higher) by at least two of the following ratings agencies: Moody's, S&P, Fitch. If only two of the three agencies rate the security, the lower rating is used to determine index eligibility. If only one of the three agencies rates a security, the rating must be investment-grade. They must have an outstanding par value of at least \$7 million and be issued as part of a transaction of at least \$75 million. The bonds must be fixed rate, have a dated-date after December 31, 1990, and must be at least one year from their maturity date. Remarketed issues, taxable municipal bonds, bonds with floating rates, and derivatives, are excluded from the benchmark.

The **Barclays Capital Revenue Bond Index** is a component of the **Barclays Capital Municipal Bond Index**. To be included in the index, bonds must be revenue bonds rated investment-grade (Baa3/BBB- or higher) by at least two of the following ratings agencies: Moody's, S&P, Fitch. If only two of the three agencies rate the security, the lower rating is used to determine index eligibility. If only one of the three agencies rates a security, the rating must be investment-grade. They must have an outstanding par value of at least \$7 million and be issued as part of a transaction of at least \$75 million. The bonds must be fixed rate, have a dated-date after December 31, 1990, and must be at least one year from their maturity date. Remarketed issues, taxable municipal bonds, bonds with floating rates, and derivatives, are excluded from the benchmark.

The **Barclays High Yield Municipal Index** includes bonds rated Ba1 or lower or non-rated bonds using the middle rating of Moody's, S&P and Fitch.

The **Barclays Capital Taxable Municipal Bond Index** is a rules-based, market-value weighted index engineered for the long-term taxable bond market. To be included in the index, bonds must be rated investment-grade (Baa3/BBB- or higher) by at least two of the following ratings agencies if all three rate the bond: Moody's, S&P, Fitch. If only two of the three agencies rate the security, the lower rating is used to determine index eligibility. If only one of the three agencies rates a security, the rating must be investment-grade. They must have an outstanding par value of at least \$7 million and be issued as part of a transaction of at least \$75 million. The bonds must be fixed rate and must be at least one year from their maturity date. Remarketed issues (unless converted to fixed rate), bonds with floating rates, and derivatives, are excluded from the benchmark.

Municipal Bond Index: To be included in the index, bonds must be rated investment-grade (Baa3/BBB- or higher) by at least two of the following ratings agencies: Moody's, S&P, Fitch. If only two of the three agencies rate the security, the lower rating is used to determine index eligibility. If only one of the three agencies rates a security, the rating must be investment-grade. They must have an outstanding par value of at least \$7 million and be issued as part of a transaction of at least \$75 million. The bonds must be fixed rate, have a dated-date after December 31, 1990, and must be at least one year from their maturity date. Remarketed issues, taxable municipal bonds, bonds with floating rates, and derivatives are excluded from the benchmark.

The **Barclays Capital Emerging Markets Index** includes USD-denominated debt from emerging markets in the following regions: Americas, Europe, Middle East, Africa, and Asia. As with other fixed income benchmarks provided by Barclays Capital, the index is rules-based, which allows for an unbiased view of the marketplace and easy replicability.

The **Barclays Capital MBS Index** covers the mortgage-backed pass-through securities of Ginnie Mae, Fannie Mae, and Freddie Mac. Aggregate components must have a weighted average maturity of at least one year, must have \$250 million par amount outstanding, and must be fixed rate mortgages.

The **Barclays Capital Corporate Bond Index** is the Corporate component of the U.S. Credit index.

The **Barclays Capital TIPS Index** consists of Inflation-Protection securities issued by the U.S. Treasury.

The **J.P. Morgan EMBI Global Index** includes U.S. dollar denominated Brady bonds, Eurobonds, traded loans and local market debt instruments issued by sovereign and quasi-sovereign entities.

The **J.P. Morgan Domestic High Yield Index** is designed to mirror the investable universe of the U.S. dollar domestic high yield corporate debt market.

The **CS/Tremont Equity Market Neutral Index** takes both long and short positions in stocks with the aim of minimizing exposure to the systematic risk of the market (i.e., a beta of zero).

The **CS/Tremont Multi-Strategy Index** consists of funds that allocate capital based on perceived opportunities among several hedge fund strategies. Strategies adopted in a multi-strategy fund may include, but are not limited to, convertible bond arbitrage, equity long/short, statistical arbitrage and merger arbitrage.

The **Barclays U.S. Dollar Floating Rate Note (FRN) Index** provides a measure of the U.S. dollar denominated floating rate note market.

*Market Neutral returns for November 2008 are estimates by J.P. Morgan Funds Market Strategy, and are based on a December 8, 2008 published estimate for November returns by CS/Tremont in which the Market Neutral returns were estimated to be +0.85% (with 69% of all CS/Tremont constituents having reported return data). Presumed to be excluded from the November return are three funds, which were later marked to \$0 by CS/Tremont in connection with the Bernard Madoff scandal. J.P. Morgan Funds believes this distortion is not an accurate representation of returns in the category. CS/Tremont later published a finalized November return of -40.56% for the month, reflecting this mark-down. CS/Tremont assumes no responsibility for these estimates.

Bonds are subject to interest rate risks. Bond prices generally fall when interest rates rise.

The price of **equity** securities may rise, or fall because of changes in the broad market or changes in a company's financial condition, sometimes rapidly or unpredictably. These price movements may result from factors affecting individual companies, sectors or industries, or the securities market as a whole, such as changes in economic or political conditions. Equity securities are subject to "stock market risk" meaning that stock prices in general may decline over short or extended periods of time.

Small-capitalization investing typically carries more risk than investing in well-established "blue-chip" companies since smaller companies generally have a higher risk of failure. Historically, smaller companies' stock has experienced a greater degree of market volatility than the average stock.

Mid-capitalization investing typically carries more risk than investing in well-established "blue-chip" companies. Historically, mid-cap companies' stock has experienced a greater degree of market volatility than the average stock.

Real estate investments may be subject to a higher degree of market risk because of concentration in a specific industry, sector or geographical sector. Real estate investments may be subject to risks including, but not limited to, declines in the value of real estate, risks related to general and economic conditions, changes in the value of the underlying property owned by the trust and defaults by borrower.

International investing involves a greater degree of risk and increased volatility. Changes in currency exchange rates and differences in accounting and taxation policies outside the U.S. can raise or lower returns. Also, some overseas markets may not be as politically and economically stable as the United States and other nations.

Investments in **emerging markets** can be more volatile. As mentioned above, the normal risks of investing in foreign countries are heightened when investing in emerging markets. In addition, the small size of securities markets and the low trading volume may lead to a lack of liquidity, which leads to increased volatility. Also, emerging markets may not provide adequate legal protection for private or foreign investment or private property.

Investments in **commodities** may have greater volatility than investments in traditional securities, particularly if the instruments involve leverage. The value of commodity-linked derivative instruments may be affected by changes in overall market movements, commodity index volatility, changes in interest rates, or factors affecting a particular industry or commodity, such as drought, floods, weather, livestock disease, embargoes, tariffs and international economic, political and regulatory developments. Use of leveraged commodity-linked derivatives creates an opportunity for increased return but, at the same time, creates the possibility for greater loss.

Investing in **alternative assets** involves higher risks than traditional investments and is suitable only for sophisticated investors. Alternative investments involve greater risks than traditional investments and should not be deemed a complete investment program. They are not tax efficient and an investor should consult with his/her tax advisor prior to investing. Alternative investments have higher fees than traditional investments and they may also be highly leveraged and engage in speculative investment techniques, which can magnify the potential for investment loss or gain. The value of the investment may fall as well as rise and investors may get back less than they invested.

Derivatives may be riskier than other types of investments because they may be more sensitive to changes in economic or market conditions than other types of investments and could result in losses that significantly exceed the original investment. The use of derivatives may not be successful, resulting in investment losses, and the cost of such strategies may reduce investment returns.

Price to forward earnings is a measure of the price-to-earnings ratio (P/E) using forecasted earnings. **Price to book value** compares a stock's market value to its book value. **Price to cash flow** is a measure of the market's expectations of a firm's future financial health. **Price to dividends** is the ratio of the price of a share on a stock exchange to the dividends per share paid in the previous year, used as a measure of a company's potential as an investment.

There is no guarantee that the use of **long and short positions** will succeed in limiting an investor's exposure to domestic stock market movements, capitalization, sector swings or other risk factors. Using long and short selling strategies may have higher portfolio turnover rates. Short selling involves certain risks, including additional costs associated with covering short positions and a possibility of unlimited loss on certain short sale positions.

The **HFRI Monthly Indices (HFRI)** are equally weighted performance indexes, utilized by numerous hedge fund managers as a benchmark for their own hedge funds. The HFRI are broken down into 4 main strategies, each with multiple substrategies. All single-manager HFRI Index constituents are included in the HFRI Fund Weighted Composite, which accounts for over 2200 funds listed on the internal HFR Database.

Equity Market Neutral Strategies employ sophisticated quantitative techniques of analyzing price data to ascertain information about future price movement and relationships between securities, select securities for purchase and sale. Equity Market Neutral Strategies typically maintain characteristic net equity market exposure no greater than 10% long or short.

Distressed Restructuring Strategies employ an investment process focused on corporate fixed income instruments, primarily on corporate credit instruments of companies trading at significant discounts to their value at issuance or obliged (par value) at maturity as a result of either formal bankruptcy proceeding or financial market perception of near term proceedings.

Merger Arbitrage Strategies which employ an investment process primarily focused on opportunities in equity and equity related instruments of companies which are currently engaged in a corporate transaction.

Global Macro Strategies trade a broad range of strategies in which the investment process is predicated on movements in underlying economic variables and the impact these have on equity, fixed income, hard currency and commodity markets.

Relative Value Strategies maintain positions in which the investment thesis is predicated on realization of a valuation discrepancy in the relationship between multiple securities.

The **Cambridge Associates LLC U.S. Private Equity Index®** is an end-to-end calculation based on data compiled from 1,052 U.S. private equity funds (buyout, growth equity, private equity energy and mezzanine funds), including fully liquidated partnerships, formed between 1986 and 2013.

The **Alerian MLP Index** is a composite of the 50 most prominent energy Master Limited Partnerships (MLPs) that provides investors with an unbiased, comprehensive benchmark for the asset class.

The Market Insights program provides comprehensive data and commentary on global markets without reference to products. Designed as a tool to help clients understand the markets and support investment decision-making, the program explores the implications of current economic data and changing market conditions.

The views contained herein are not to be taken as an advice or recommendation to buy or sell any investment in any jurisdiction, nor is it a commitment from J.P. Morgan Asset Management or any of its subsidiaries to participate in any of the transactions mentioned herein. Any forecasts, figures, opinions or investment techniques and strategies set out are for information purposes only, based on certain assumptions and current market conditions and are subject to change without prior notice. All information presented herein is considered to be accurate at the time of writing, but no warranty of accuracy is given and no liability in respect of any error or omission is accepted. This material should not be relied upon by you in evaluating the merits of investing in any securities or products. In addition, the Investor should make an independent assessment of the legal, regulatory, tax, credit, and accounting and determine, together with their own professional advisers if any of the investments mentioned herein are suitable to their personal goals. Investors should ensure that they obtain all available relevant information before making any investment. It should be noted that the value of investments and the income from them may fluctuate in accordance with market conditions and taxation agreements and investors may not get back the full amount invested. Both past performance and yield may not be a reliable guide to future performance. Exchange rate variations may cause the value of investments to increase or decrease. Investments in smaller companies may involve a higher degree of risk as they are usually more sensitive to market movements. Investments in emerging markets may be more volatile and therefore the risk to your capital could be greater. Further, the economic and political situations in emerging markets may be more volatile than in established economies and these may adversely influence the value of investments made.
